

An introduction to the FreeBSD Project

PHILIP PAEPS

PHILIP@FREEBSDFOUNDATION.ORG

Who am I?

FreeBSD src and ports committer

- Mostly active in the network stack (IPv6, if_bridge, network device drivers)
- Former member of the security team and retired core team secretary
- Maintainer of several ports and some unpopular contributed code (tzdb)

Director of the FreeBSD Foundation

- Bouncing from conference to conference around the world
- Tirelessly advocating FreeBSD to potential contributors

Consultant

- Device drivers and real-time operating systems
- Electronics, particularly wireless
- Professional paranoid

What is FreeBSD?

FreeBSD is an open source Unix-like **operating system** descended from patches developed at the University of California, Berkeley in the 1970s.

The FreeBSD Project is an active open source **community** since 1993 with hundreds of committers and thousands of contributors around the world.

The FreeBSD Foundation is a **non-profit organisation** registered in Colorado, USA in 2001 dedicated to supporting the FreeBSD Project, its development and its community.

Who uses FreeBSD?

Who uses FreeBSD?

Gandi

NetApp

Dell/EMC/Isilon

Panasas

Apple

Limelight Networks

Swisscom

Sentex

RTEMS

WhatsApp

Juniper Networks

Verisign

Perseus Telecom

Sony

XipLink

McAfee

NYI

Yahoo

Where FreeBSD excels

Video caching servers

- Netflix

Playstation 3 and 4

- Sony

Global instant messaging

- WhatsApp/Facebook

Enterprise file servers

- NetApp
- Dell/EMC/Isilon

Routers and switches

- Juniper Networks

Key internet infrastructure

- Many DNS root servers
- DNS servers for several ccTLDs

Where FreeBSD excels

Community

- Friendly and professional
- Many active contributors and committers for 10+ and even 20+ years (and longer)

Mentoring

- Built into the Project's culture and processes

Documentation

- FreeBSD Handbook, FAQ, Developers' Handbook, Porters' Handbook, Documentation Project Primer, man pages

Licence

- 2-clause BSD licence
- Does not restrict what you can do with your own code!

Why do people develop with FreeBSD?

Excellent features

High performance

Excellent tools

Mature development process

Proven track record

Friendly licence

The FreeBSD operating system

WHAT'S IN THE BOX AND HOW DOES IT WORK?

FreeBSD is a complete system

- Not just a kernel!
- Development tools and source code
- Complete documentation
- More than 25,000 third-party open source software packages

The FreeBSD kernel

- Multi-processing multi-threaded kernel
- Support for many popular hardware architectures
 - Intel/AMD x86/64, ARM, PowerPC, MIPS, sparc64
- UNIX, POSIX, BSD programming interfaces
- Multi-protocol network stack
 - IPv4, IPv6, IPX/SPX, AppleTalk, IPSEC, ATM, Bluetooth, IEEE 802.11, SCTP,...
 - Reference implementation for many protocols
- Unified, coherent build-system across components
- Extensive documentation

System call translation

- Affectionately known as “Linux personality disorder” or “Linuxolator”.
- Natively runs a substantial subset of Linux ELF binaries on FreeBSD.
- Often runs Linux binaries faster than Linux*.

Use cases: not invented here applications for Linux, databases, CAD tools,...

Known to work: Oracle, Eagle CAD, Mentor Graphics, many others!

* Usual disclaimers apply. Batteries not included. May contain traces of nuts.

The FreeBSD userland

- Complete, integrated Unix system
 - Expected tools are in the base installation – no extra packages needed
 - Build-time knobs to trim the system down for appliances
- Kernel and userland maintained together
 - Userland is always in sync with the kernel
 - New kernel features are immediately available in userland
- Strong focus on consistency
- POLA: Principle of Least Astonishment
- Extensive documentation – again

Pervasive security features

- A jail(8) is a network-connected chroot(8)
 - With many nice extra features
 - VIMAGE provides a complete network stack to every jail
- Reduce the power of “root”
- Improved compartmentalisation of services with Capsicum
- Flexible configuration options
- Mandatory access controls and audit frameworks

The FreeBSD network stack

TCP/IP was originally developed on BSD and FreeBSD remains the reference implementation for several network protocols.

- Full support for IPv4 and IPv6
- Active development on TCP with pluggable congestion control
 - New Reno, CUBIC and RACK in supported releases
 - BBR in -CURRENT (soon) for aggressively antisocial networking
- Reference implementation of SCTP

FreeBSD filesystems

UFS

- Traditional Unix filesystem
- High performance
- Snapshots
- Journalled Soft Updates

ZFS

- Zetabyte file system (originally from Sun)
- Filesystem and volume manager
- RAID (many options)
- Fully up to date and supported in FreeBSD!

Virtualisation

- Very lightweight virtualisation with jail(8) and VIMAGE
- Full Xen DomU support
- bhyve hypervisor
 - Native hypervisor
 - Runs FreeBSD and other BSDs, Linux and Windows images
 - Ported to macOS as xhyve
- Ready to use installation images for popular virtualisation platforms
 - VMWare, VirtualBox, KVM/qemu, HyperV
 - Amazon EC2 marketplace and Azure available, Google Cloud Compute work in progress

Ports and packages

25,000 packages for use on FreeBSD

Databases

Programming languages

Human languages

Editors

Network tools

Graphics

Audio

Benchmarks

Documentation

FreeBSD is extensively documented

- FreeBSD Handbook, Developers' Handbook, Porter's Handbook
- Online Unix manual pages
- Several articles on www.freebsd.org

Developers write their own documentation

Professional tech writers copy-edit and write higher-level documentation

Working with FreeBSD

GETTING STARTED WITH DEVELOPING ON FREEBSD

Develop in any language

C

C++

Erlang

Go

Rust

Java (openjdk8)

Python

Perl

PHP

Keeping up to date

SUBVERSION

- Official repository
- All branch names properly reflected
- Releases cut from this repository
- <https://svn.freebsd.org>

GIT AND GITHUB

- Mirror of Subversion
- Easier branch model
- Rebasing hazards
- Pull requests coming soon

The source tree

Complete operating system in the base Subversion repository

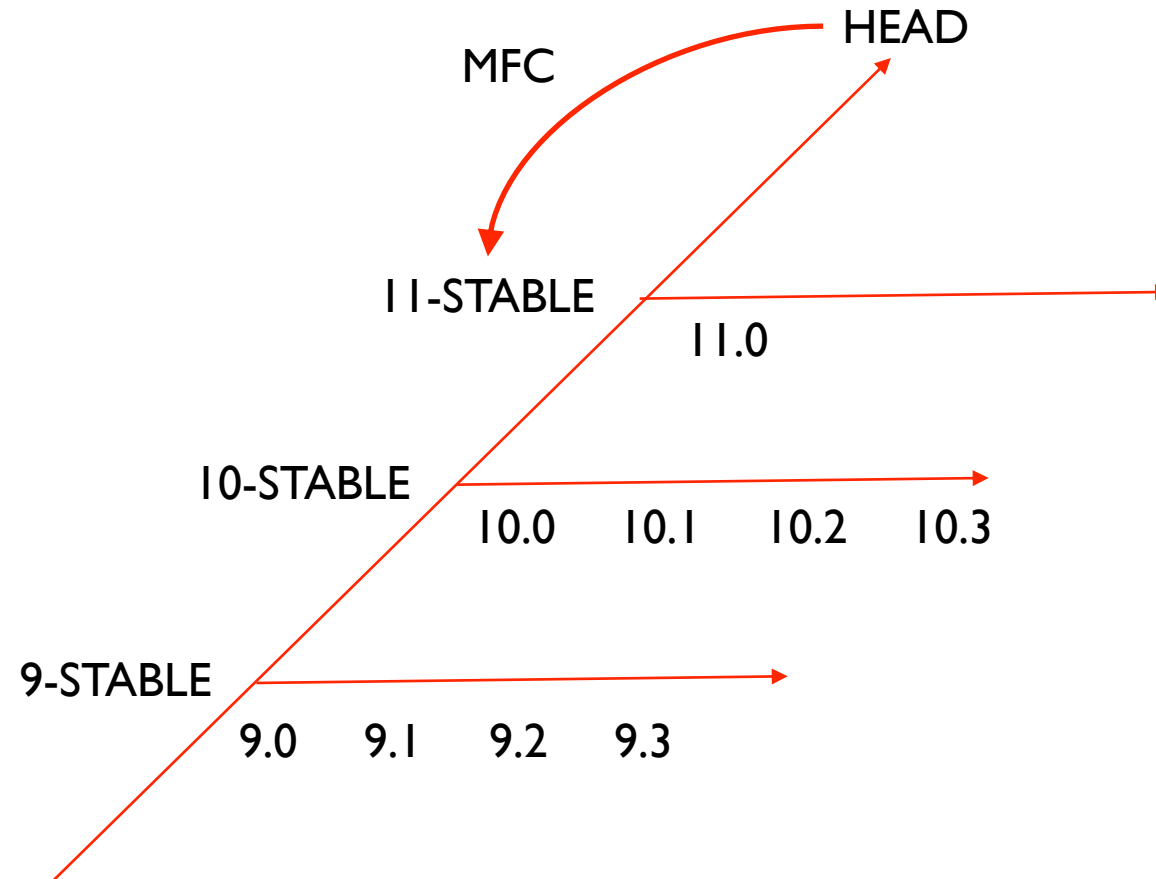

- Coherent and structured build system
- Build all of FreeBSD with a single command
- Every component lives in its own subdirectory
- Kernel is just another subdirectory (sys/)

Documentation is part of the source tree

- Userspace manpages live with the respective components
- Kernel documentation lives in share/man
- Several historical papers in share/misc

Branched development model

The FreeBSD development process

The ports tree

The ports tree is a collection of over 25,000 third-party open source packages.

- Flexible, source-based package management framework
- Maintainers port third-party software to FreeBSD
- Ports committers keep ports up to date
- Separate repository from src, not tagged to releases
- Quarterly “snapshots” are branched and tagged

Building your own packages

The poudriere system is used to build package sets locally

Package sets can be hosted by anyone

Sets can be of mixed origin

- Officially distributed from freebsd.org
- Built internally as part of your product

Depends on the ports system

Ports has its own repository

- Subversion
- GitHub

Contributing code

Project accepts code changes under the BSD license

Anyone can create an account on the code review system

- reviews.freebsd.org

Committers review contributions

- Commit if accepted
- Comment if changes are required

Eventually you may also become a committer

- We recruit!

The BSD licence

GPLv2

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991 Copyright (C) 1989, 1991 Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble. The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too. When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things. To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it. For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights. We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software. Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations. Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all. The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains notices placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law; that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you". Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program. You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
- If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.) These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it. Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program. In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.
- You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:
 - Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
 - Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
 - Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.) The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as an exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable. If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.
- You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
- You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.
- Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.
- If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program. If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances. It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest the validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice. This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.
- If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
- The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.
- If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms. To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
<copyright (C) <year> <author>>
This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version. This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details. You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA. Also add information on how to contact you by electronic and paper mail. If the program is interactive, make it output a short notice like this when it starts in an interactive mode: Gnomovision version 69, Copyright (C) year name of author. Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'. This is free software, and you are welcome to redistribute it under certain conditions; type `show c' for details. The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items--whatever suits your program. You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; replace the names: Yooyodyne, Inc., hereby disclaims all copyright interest in the program Gnomovision (which makes passes at compilers) written by James Hacker. <signature of Ty Coon, President of Vice>
GNU General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License.

The FreeBSD community

WHO ARE THESE PEOPLE?

FreeBSD committers

A committer has write access to one or more FreeBSD repositories.

Three main repositories:

- **src**: the base system and the kernel
- **ports**: third-party packages
- **doc**: documentation (handbook, etc)

Committers are selected based on key characteristics:

- Technical expertise
- History of contribution to the FreeBSD Project
- Ability to work well in the community
- Having made these properties obvious!

Key concept: mentor

The FreeBSD community **notices** contributors who are easy to work with, willing to learn and who establish a *track record* of submitting good patches.

Contributors are *recommended* for a commit bit. New committers have a **mentor** who is responsible for reviewing each of their commits.

After a variable period of time, pre-approval is no longer required and the committer can commit directly. Committers are still expected to seek peer review for non-trivial patches or new code.

Once released from mentorship, committers can mentor new committers themselves.

FreeBSD core team

Historically “key” developers but now...

...9-member elected management body

- Votes and candidates from the full set of active committers
- Co-opted non-voting core team secretary

Responsibilities

- Administrative (commit bits, hats, team charters)
- Strategic (project direction, coordination, cajoling)
- Rules, conflict resolution, enforcement

We have no “benevolent” dictators for life!

Conflict resolution

Developers generally characterised by:

- Independence
- Cooperation
- Common sense

Facilitated by intentional avoidance of overlap.

Strong technical disagreements, personality conflicts,...

Mediation by core.

Hats, groups and teams

Developers

- src, ports, doc committers
- Core team
- Core team secretary
- Release engineering team
- Release engineering builders
- Security officer
- Security team
- Security team secretary
- Ports manager team
- Ports manager secretary
- Documentation team
- Vendor relations team

Administrative

- Foundation board of directors
- Foundation staff
- FreeBSD.org clusteradm
- FreeBSD.org webmaster
- FreeBSD.org mirrors team
- Donations team

- Postmaster

Wait! I'm not done yet!

Administrative (cont.)

- Sentex cluster admins
- NYI cluster admins

Other contributors

Software adaptation teams

- GNOME team
- KDE team
- Mono on FreeBSD
- Python team
- Java team

Special projects

- Stress testing
- FreeBSD tinderbox
- GSoC mentors
- Continuous integration testers

External teams

- TrustedBSD project
- TrueOS developers
- FreeNAS
- pfSense

Who are the FreeBSD committers

Locations

- 34 countries
- 6 continents

Ages

- Oldest (documented) committer born in 1948
- Youngest (documented) committer born in 1991
- Mean age 39.5, median age 38, stddev 7.7
- Data from circa July 2015

Professional programmers, hobbyists, consultants, university professors, students

Why get involved?

Advantages of joining the FreeBSD community

- Opportunity to work with a mature open source community with well-documented processes and a built-in culture of mentoring.
- Ability to learn from senior technologists who have written filesystems, network stacks, security frameworks and much more!
- Interact with people from around the globe who share your passion.

A large and diverse body of work

- Source code and documentation for all aspects of an operating system spanning several decades of development.
- Opportunity to participate in a large source repository with several hundred active contributors.

The FreeBSD community

No glass ceiling

- No one cares about (or necessarily even knows) your age, gender, race, sexual preferences, lifestyle choices or anything else about you. You are known entirely by your body of work and how you participate in the community.
- You can find a niche and over time become an expert in that niche.
- Collaborate with and build professional relationships with other experts across the globe.

No toxic community

- FreeBSD has no angry “benevolent” dictators for life.
- Our community has a long history of avoiding poisonous people.

How to become a FreeBSD committer

Anyone can download the FreeBSD source code and submit patches.

Find an area that interests you, submit patches and engage with reviewers.

Engage with the community around your area of interest (IRC, mailing lists).

Report bugs. Review patches.

Get involved. **Be visible!**

Come to our conferences!

The FreeBSD Foundation offers several travel grants (fellowships) to community members who need assistance with travel expenses for attending conferences related to FreeBSD development and advocacy.

<https://www.freebsdoundation.org/what-we-do/grants/>
